计算机体系架构 第六周作业

范云潜 18373486

微电子学院 184111 班

日期: 2020年10月13日

作业内容: B.2 B.4 B.6 B.11 B.18 B.21

Problem B.2

$$E = ((A \cdot B) + (A \cdot C) + (B \cdot C)) \cdot (\overline{A \cdot B \cdot C})$$

$$= (AB + AC + BC) \cdot (A' + B' + C')$$

$$= (A'BC + AB'C + ABC')$$

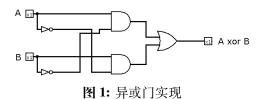

$$= (A \cdot B \cdot \overline{C}) + (A \cdot C \cdot \overline{B}) + (B \cdot C \cdot \overline{A})$$

Problem B.4

$$AxorB = (AB') + (A'B)$$

表 1: xor 真值表

| {AB} | A xor B |
|------|---------|
| 00 | 1 |
| 01 | 0 |
| 10 | 0 |
| 11 | 1 |

Problem B.6

$$A' = (A \cdot 1)'$$

$$A \cdot B = ((A \cdot B)')'$$

$$A + B = (A' \cdot B')'$$

Problem B.11

SubProblem 1

$$(\sum (x_i = 0) == 1) = x_2' x_1 x_0 + x_2 x_1' x_0 + x_2 x_1 x_0'$$

SubProblem 2

$$(\sum (x_i = 0)\%2 == 0) = x_2' x_1' x_0 + x_2' x_1 x_0' + x_2 x_1' x_0' + x_2 x_1 x_0$$

SubProblem 3

$$(\mathtt{unsigned} X < 4) = x_2' x_1' x_0' + x_2' x_1' x_0 + \\ x_2' x_1 x_0' + x_2' x_1 x_0$$

SubProblem 4

(signed
$$X < 0$$
) = x_2'

Problem B.18

FUNC1 是一个 MUX, 在 S = 1, 输出 I1, 其他时刻输出 I0。

FUNC2 是一个计数器,在复位时输出归零, 其他时刻若是 ct1 为一则输出加一,反之减一。

Problem B.21

```
);
reg [15:0] str;
assign out = str;
always @(posedge clk or rst_a) begin
   if (rst_a) begin
       str <= 0;
    end
    else begin
       if (load) begin
           str <= Load;
       end
       else begin
          str <= in + out;
       end
    end
end
endmodule
```
